Clean energy

The European Green Deal

December 2019
#EUGreenDeal

Decarbonising the EU's energy system is critical to reach our climate objectives.

Key Principles:

Prioritise energy efficiency and develop a power sector based largely on renewable sources

Secure and affordable EU energy supply

Fully integrated, interconnected and digitalised EU energy market

The production and use of energy account for more than **75%** of the EU's greenhouse gas emissions

18% of the EU's gross final energy consumption came from renewable sources in 2017

The European Commission will make proposals to increase the EU's climate ambition for 2030.

Relevant energy legislation will be proposed by June 2021. EU Member States will then update their national energy and climate plans in 2023, to reflect the new climate ambition.

GHG
emissions

2023: EU Member States update their national energy and climate plans to reflect the new climate ambition.

• **Interconnect energy systems** and better link/integrate renewable energy sources to the grid

• Promote innovative technologies and **modern** infrastructure

• **Boost energy efficiency** and **eco-design** of products

• **Decarbonise the gas sector** and promote **smart integration** across sectors

• **Empower consumers** and help Member States tackle energy poverty

• **Increase cross-border and regional cooperation** to better share clean energy sources.

• Promote EU energy standards and technologies at **global level**
