SRI Platform 3rd plenary meeting: recording, presentation and report

On 22 March 2023, the SRI platform held its third plenary stakeholders' meeting.

The SRI platform is an exchange forum involving building professionals interested in the SRI, and more generally in smart and efficient buildings. This 3rd plenary meeting gathered around 300 participants, both in-presence in Brussels and online. The event was an opportunity to hear the latest updates from the front running Member States who are currently implementing an official test phase of the SRI: in particular, Czech Republic, France and Croatia were able to share their progress, initial findings, and some practical examples of SRI assessments conducted on buildings (More details about ongoing test phases is provided [here](#)).

The SRI platform working groups were able to present the progress of their work on maintenance & potential extension of the SRI calculation methodology, and around the SRI value proposition and supporting measures.

This meeting was also an opportunity to learn more about the four LIFE Clean Energy Transition projects: easySRI, Smart2, SRI-ENACT and SRI2MARKET. Together, these projects gather 42 partners from 16 countries, who will offer significant support in the deployment and upscaling of the Smart Readiness Indicator in Europe.

SRI explained: three new factsheets released

There are nine technical domains addressed by the SRI. To get a deeper understanding of how the SRI works for each of these domains, we invite you to give a look at the 'SRI-explained' factsheets.

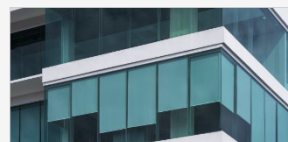

A focus on ventilation systems (June 2022)

A focus on lighting systems (August 2022)

A focus on electric vehicle charging systems (October 2022)

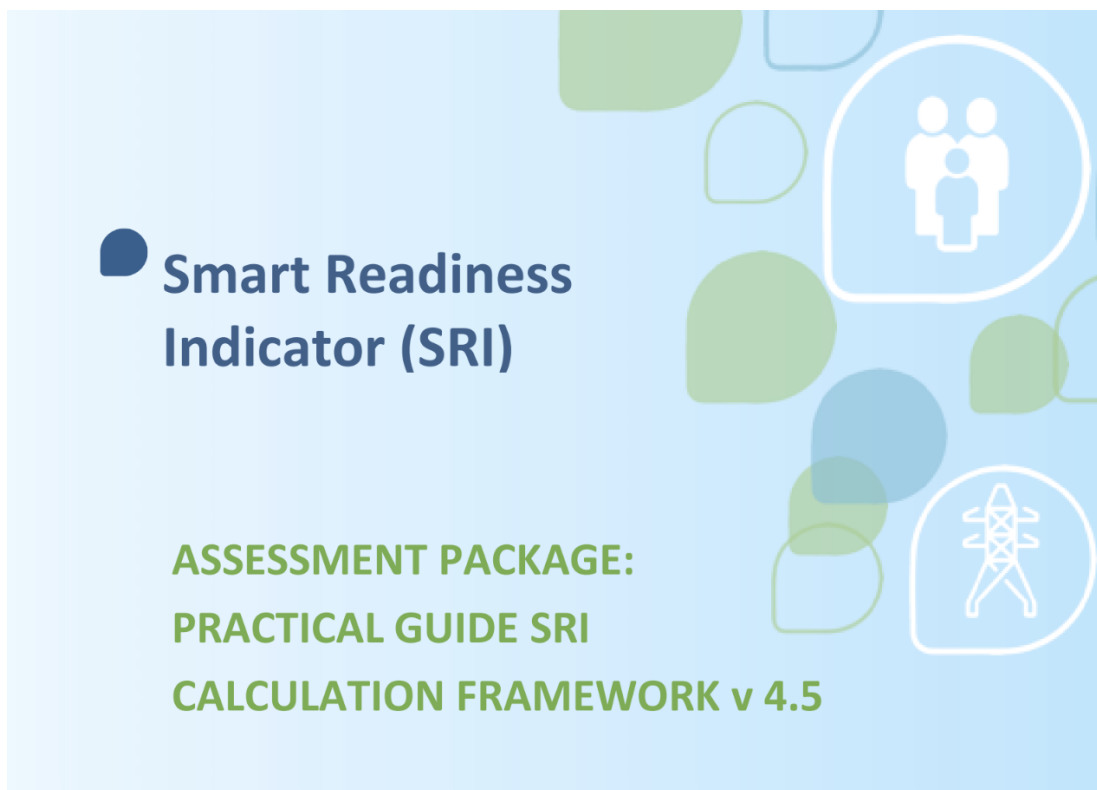

The SRI support team is pleased to release the factsheets related to the 🏠 Domestic Hot Water, ⚡ Electricity, and 📊 Monitoring & Control technical domains. All other factsheets are accessible through the [SRI implementations page](#).

SRI assessment package: updated version

An updated version (v4.5) of the SRI calculation sheet and its practical guide have been released.

You can fill in [this form](#) to ask for the SRI assessment package, which consists of a calculation sheet and a practical guide. This [video](#) provides a live demonstration of using the SRI assessment package with practical examples.

This newly released version includes updates on the results and calculation pages, an improved description of weighting factors definition in the practical guide, as well as several improvements and bug fixes.

News and updates on the implementation of the smart readiness indicator (SRI) under the energy performance of buildings directive (EPBD).
